

## Application Modernisation

Many organisations are reliant on mission-critical business systems developed many years ago. Unfortunately some legacy systems have not evolved at the rate required by the business.

Legacy systems can suffer from the following challenges:

- Developed as monolithic silo solutions that don't integrate with other systems
- Inadequate and inefficient user interfaces
- Lack of independent task-based workflow
- Obsolete or limiting technology with little or no support
- Costly maintenance

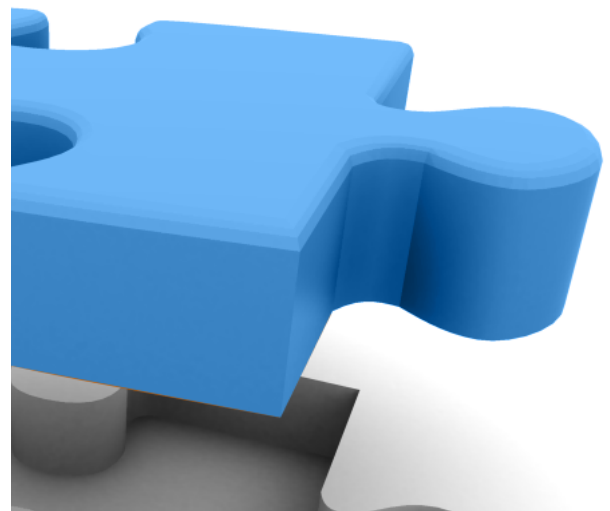

The challenging task of bringing legacy applications up to date in order to leverage benefits of new technologies and other applications is an area that ICS are experienced and skilled in. Modernisation can be a cost effective and reduced risk pathway to extending the applications longevity without risking a complete redevelopment exercise. ICS's skills in analysis, defined processes and development techniques all help in turning a legacy application into a resilient and contemporary application fit for purpose.

### Deliverables

The Quick Start Package for legacy application consultancy is 5-10 days with at least 50% on-site consultancy. ICS will undertake a detailed analysis of the application's architecture, interfaces, data-sources and key processes. Access to key business users and IT personnel will be necessary. Following the on-site consultancy ICS will produce a vision document with recommendations that tackle the area of Application Modernisation.

## The Quick Start Package starts from £3995\*

\*Price is exclusive of expenses and VAT.

## Application Development Expertise

A Microsoft Gold Partner, ICS is a leading technical consultancy specialising in Custom Application Development and Support for Mid-market and Enterprise organisations using Microsoft and Oracle technologies.

Our consultants are experts in the installation, configuration, design, development and deployment of:

- Custom Applications
