

## Application Re-engineering

Facing the challenge of ageing and maintaining expensive legacy systems?

Need to transform business systems to the latest technologies to provide greater business flexibility and lowest TCO?

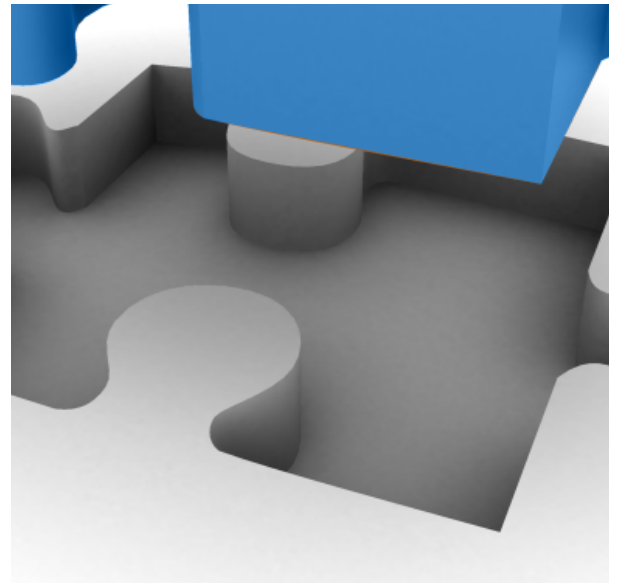

Quite often legacy applications can be re-engineered to exploit the best of the current technology platform they are on or even utilise new and improved technologies. This will often be due to the necessity to optimise the application due to increased usage and volumes of data. Existing logic and workflow can be extracted and re-engineered or 're-factored' to follow improved patterns and practises, resulting in greater stability, improved performance, more manageability, and less costly maintenance. ICS are specialised in this field having re-engineered amongst other application a major real-time trading application using proven techniques and tools together with years of development expertise, business analysis and proven processes experience.

### Deliverables

The Quick Start Package for legacy Application consultancy is a 5-10 day package with at least 50% on-site consultancy. ICS will undertake a detailed analysis of the application's architecture, interfaces, data-sources and key processes. Access to key business users and IT personnel will be necessary. Following the on-site consultancy ICS will produce a vision document with recommendations that tackle the area of Application re-engineering.

The Quick Start Package starts from £3995\*

\*Price is exclusive of expenses and VAT.

## Application Development Expertise

A Microsoft Gold Partner, ICS is a leading technical consultancy specialising in Custom Application Development and Support for Mid-market and Enterprise organisations using Microsoft and Oracle technologies.
