

Custom Application Development

Application development without correct processes can lead to overruns and other major issues. A simple application constructed incorrectly can become a big problem for an organisation. ICS has years of experience in custom application development for various organisations using a range of technologies, industry standards and proven methodologies.

We can help organisations decide the type of application or system they require, provide them with various alternatives and select the right technologies for the application. We can also evaluate existing business applications with a view to integrating the new application. ICS can also help in re-engineering existing systems and improve the performance of existing applications.

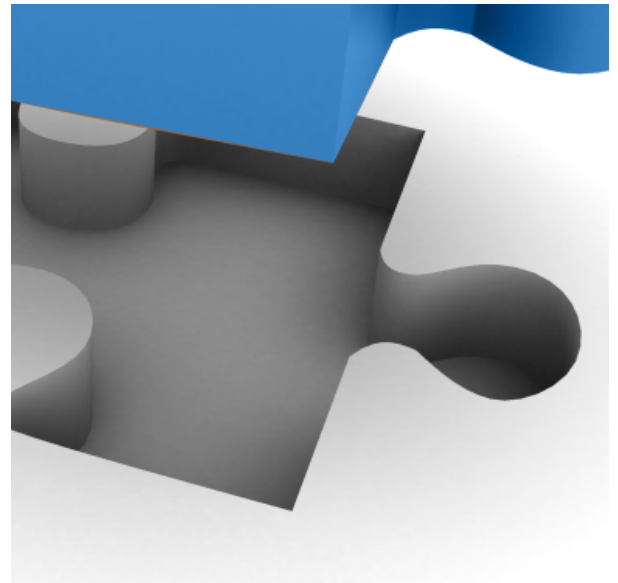

Deliverables

The five day Quick Start Package will commence with a workshop to understand the business and existing systems. Access to key business users and IT personnel will be necessary. Following the on-site consultancy, ICS will produce a 'vision' document with recommendations that tackle the area of Custom Application Development. If the project is approved, then a detailed project plan and solution can be defined.

This Quick Start Package will provide the business with visibility of alternative solutions. It will identify the way in which the new application will fit into the business and technical infrastructure and the benefits that can be reaped from re-engineering existing applications.

The Quick Start Package is charged at £3995*

*Price is exclusive of expenses and VAT.
